**FUND MANAGER'S REVIEW**

**Market Review**

The Dow Jones Industrial Average index rallied by 8.6% in July sparked by better than expected corporate results as well as improving new home sales. The rally in the US sparked an even greater climb in Asia with the MSCI Asia Pacific ex-Japan index increasing 12% during the period. The top performing regional markets were China, Philippines, and Indonesia. Malaysia lagged regional markets with the FBM KLCI gaining 9.3%. Banking and construction stocks were in the limelight during the month. New construction contracts and the sale of SPLASH helped to generate interest in the construction and building material sector. The launch of the RM10bn Amanah Saham 1 Malaysia Fund is expected to spur some market activity once the money is deployed to equities.

Local government bonds were traded higher on bargain hunting activities and positive comment from Dr Zeti that BNM still has the flexibility to lower policy rate further, if needed. BNM left the OPR unchanged for the third consecutive time in its last MPC meeting on July 29, citing that the domestic economy has shown signs of stabilisation and expects the economy to improve in 2H09 and into 2010. At month end, MGS yield curve bull steepened with the 3, 5, 10 and 20-year MGS ended at 2.88% (-10bs), 3.69% (-13bps), 4.29% (-9bps) and 4.85% (-2bps) respectively. The headline inflation rate dropped 1.4% yoy in June, the lowest since 1986, from +2.4% in May. The contraction was in line with market expectation. Year-to-date, the CPI grew at a slower pace of +2.5% yoy. Earlier, the Malaysian Institute of Economic Research (MIER) downgraded its GDP forecast for Malaysia to -4.2% from -2.2% previously as the global recession would reduce exports and household spending. In the mean time, it also lowered its 2010 GDP growth forecast to +2.8% from +3.3%.

**Manager's Comments**

For the month of July, the Fund underperformed its benchmark. The underperformance was due to the Fund's equity exposure which is below the targeted asset allocation level. While we believe that 2Q09 could mark the bottom of the market, we believe that the recent market upturn has been too sharp and there is a possibility of a correction. We would look to increase our equity exposure on pullbacks. In terms of fixed income, we prefer short to medium term high quality private debt securities for better yield pick-up as spreads for these securities have widened to multi year highs.
